Gleb Milkevich
Design Engineer
Github | Portfolio | glebmilkevich@icloud.com

Design Engineer specializing in **web and cross-platform mobile development** with **React**, **React Native**, and TypeScript. Experienced in building polished, scalable products with a strong focus on **frontend architecture**, **design systems**, and interaction quality. Combines technical expertise with product and design thinking, leveraging AI-assisted development tools to accelerate iteration and delivery.

RELEVANT EXPERIENCE

AUTUMN
Founding Design Engineer (Contract) • New York City, NY • 09.2026 - 10.2026

- Designed and developed interactive interfaces for AI-powered hospitality products, focusing on visual quality, usability, and intuitive user experiences.
- Built data visualizations, animated interactions, and responsive layouts to make complex information more engaging and accessible.
- Helped establish brand guidelines and design system foundations, including visual styles, reusable components, and consistent UI patterns.
- Collaborated with founders and engineers to translate product ideas into polished interfaces, rapidly prototyping and refining designs based on feedback.

FLICKHUNT
Frontend Developer (Full-time) • Remote • 06.2025 - 09.2026

- Built and shipped a cross-platform mobile application for iOS and Android using React Native and Expo, owning core product experiences from implementation through release.
- Developed interactive movie discovery, swiping, and collaborative matching experiences, combining intuitive workflows with smooth, native-like interactions.
- Implemented personalized discovery and filtering logic, alongside fluid animations using Reanimated to improve the browsing experience.

- Led development of an internal admin panel for managing users and content, while collaborating with product and backend teams to shape features and refine the user experience.

CHYPER MOTION
Frontend Developer (Full-time) • Remote • 02.2024 - 03.2025

- Built the frontend application from the ground up using React and TypeScript, translating product requirements into responsive, production-ready interfaces.
- Designed and implemented a scalable design system with reusable components and consistent UI patterns, simplifying development and improving product consistency.
- Developed interactive dashboards and data visualizations using Recharts and Three.js, making complex datasets easier to explore and understand.

FREELANCE WORK
Software Engineer • Remote • 09.2022 - 02.2024

- Designed and developed custom web applications using React, TypeScript, and Next.js, owning projects from initial concepts through deployment and ongoing improvements.
- Built reusable component systems and interactive product experiences, including dashboards, e-commerce platforms, admin panels, and internal tools.
- Integrated third-party APIs, authentication, payments, analytics, and content management systems into maintainable, production-ready applications.

PROJECTS

PLAINFRAME UI
Creator & Maintainer • Demo • 05.2025 - Present

- Created an open-source React and TypeScript component library featuring 40+ customizable UI components, designed for flexibility, consistency, and ease of integration.
- Architected a reusable component system with typed APIs, configurable variants, and shared design tokens for colors, spacing, typography, and sizing.
- Designed and built the library's documentation website, focusing on accessibility, responsive behavior, smooth interactions, and a cohesive developer experience.

ROUTEVEIL
Creator & Maintainer • Demo • 07.2026 - Present

- Developed an open-source React Router transition library with 20 customizable animation effects, enabling expressive navigation without complex animation logic in individual pages.
- Architected a transition system that coordinates navigation, rendering, animations, and cleanup, while preserving accessibility, focus management, and scroll behavior.
- Built strongly typed APIs, interactive documentation, and an animation playground, packaging the library for npm with automated tests and reduced-motion support.

SKILLS

React, React Native, Expo, TypeScript, JavaScript, Zustand, React Hook Form, Reanimated, Recharts, Shadcn/UI, HTML, CSS, Git, Rest APIs, Jest, Redux, ES6, Next.js, Node.js, and other related technologies
