Gleb Milkevich

Frontend Engineer

Github | Portfolio | glebmilkevich@icloud.com

Frontend Engineer specializing in **web and cross-platform mobile development** with **React**, **React Native**, and **TypeScript**. Experienced in building polished, scalable products from scratch and contributing to established codebases, with a strong focus on component architecture, interaction quality, and maintainable frontend systems. Comfortable collaborating across product, design, and engineering teams, and using AI-assisted development tools to accelerate iteration, debugging, and delivery.

PROJECTS

PLAINFRAME UI

Frontend Developer • Demo • 05.2025 - Present

- Built Plainframe UI, an open-source React + TypeScript component library focused on clean design, reusable components, and fast frontend development.
- Designed and developed 40+ reusable UI components with flexible props, variants, sizes, states, and theme-based styling.
- Created a custom theming system with shared values for colors, spacing, radius, and component sizing to keep the library consistent and scalable.
- Used Emotion CSS and TypeScript to create maintainable component APIs with strong typing and customizable styling.
- Improved component quality by focusing on accessibility, responsive behavior, smooth animations, and consistent interaction states.
- Built the project from scratch, including the component architecture, styling system, documentation structure, and public website.

ROUTEVEIL

Frontend Developer • Demo • 07.2026 - Present

- Engineered Routeveil, a React Router transition system that coordinates route changes with page-level and full-screen overlay animations.
- Implemented 20 transition effects, including directional motion, radial reveals, tiled overlays, procedural dissolve effects, and depth-based page animations.
- Designed a transition lifecycle that handles exit, navigation, render readiness, enter, cleanup, focus restoration, and scroll behavior without placing animation logic inside route components.

- Created strongly typed APIs that infer valid transitionOptions from the selected transition and support declarative links, programmatic navigation, and same-page transition playback.
- Built cursor-aware and viewport-aware effects with safe fallbacks, reduced-motion handling, native link behavior, and protection against overlapping transition requests.
- Packaged the library for npm with a dedicated routeveil/react-router entry point, generated TypeScript declarations, consumer tests, documentation, and an interactive transition lab.

RELEVANT EXPERIENCE

FLICKHUNT

Frontend Developer • Remote • 06.2025 - Present

- Built and shipped a cross-platform mobile application for iOS and Android using React Native and Expo, focusing on smooth UX and performance.
- Developed core user flows, including movie discovery, swiping, and collaborative movie matching.
- Implemented complex client-side logic for personalized content and filtering, improving the relevance of recommendations.
- Optimized animations and interactions using Reanimated, ensuring a native-like experience.
- Led the development and maintenance of the admin panel used to manage content and users, improving internal operations.
- Collaborated closely with design and backend teams to translate product ideas into production-ready features.
- Contributed to product decisions, helping shape features and the user experience.

CHYPER MOTION

Frontend Developer • Remote • 02.2024 - 03.2025

- Built the entire frontend application from scratch using React and TypeScript.
- Designed and implemented a scalable design system, improving development speed and ensuring UI consistency.
- Developed interactive dashboards and data visualizations using Recharts, simplifying complex datasets.
- Integrated 3D visualizations using Three.js to enhance data exploration and user engagement.

- Collaborated with backend and design teams to deliver a cohesive product experience.

FREELANCE WORK
Software Engineer • Remote • 09.2022 - 02.2024

- Built and shipped custom web applications from scratch using React, TypeScript, Next.js, and modern frontend technologies.
- Designed and implemented reusable component libraries and design systems, improving development speed and maintaining UI consistency across projects.
- Collaborated directly with clients to translate business requirements into polished, production-ready user experiences.
- Developed interactive dashboards, admin panels, e-commerce platforms, and internal tools with a focus on performance, scalability, and usability.
- Integrated third-party APIs, authentication systems, payment providers, analytics platforms, and CMS solutions.
- Owned projects end-to-end, from initial design and architecture through deployment, maintenance, and ongoing feature development.

SKILLS

React, React Native, Expo, TypeScript, JavaScript, Zustand, React Hook Form, Reanimated, Recharts, Shadcn/UI, HTML, CSS, Git, Rest APIs, Jest, Redux, ES6, Next.js, Node.js, and other related technologies
